## ◦ SKILLS ◦

HTML/CSS

Bootstrap 4

jQuery

JavaScript

React

Node

Express

MongoDB

Firebase

Git

Adobe Photoshop

Adobe Illustrator

## PROFILE

Hi, I'm Brendan a well-organized, hardworking, highly motivated, individual with a high attention to detail and a passion for web development. I love to learn and constantly challenge myself and take pride in being a fast learner and problem solver. I'm excited to take what has become a full-fledged passion and continue to grow and develop into the best version of myself.

## EXPERIENCE

### YELP CAMP

**Full Stack** - HTML, CSS, Bootstrap, Node, Express, MongoDB, Git

A full stack CRUD web application built with a simple front-end and Node, Express, and Mongoose on the back-end. It's hooked up to a MongoDB databases and features full user authentication.

Building this app gave me a fantastic look into the full cycle of web development. While lacking in front-end showmanship it gave me a strong knowledge of implementing a successful back-end featuring user-authentication and database manipulation.

### NETFLIX CLONE

**React App** - HTML, CSS, React, API, Firebase

A React App hosted on Firebase that mimics the Netflix movie page. Features functional horizontal scrolling, Updating Banner, Updating lists, and if available, Trailers thanks to the TMDb API.

This project gave me a strong foundation of React and a passion for front-end development. This build gave me a wealth of knowledge not only pertaining to development in React, but implementing a successful API as well.

### COLOR GAME APP

**JavaScript App** - HTML, CSS, JavaScript

A fun color game to brush up on your RGB knowledge. The goal is to correctly match the color square with the randomly generated RGB value. Completed with two difficulty levels.

Built with HTML, CSS, and JavaScript this application was a great learning experience in DOM Manipulation, Loops, and jQuery. This app gave me a strong understanding of JavaScript in a development setting.

### RECIPE FINDER

**React App** - HTML, CSS, React, API, Firebase

A React App hosted on Firebase that allows you to search for recipes based off a food. Useful for finding tasty recipes for that leftover food you're not quite sure what to do with.

This build allowed me to gain a stronger understanding of useEffects and useStates in React development as well open my mind to different problems web development can solve.

## COURSES

Web Development Bootcamp, Udemy - Colt Steele

Computer Science, Apollo High School
